

SECURITY & COMPLIANCE

Security, architecture and technical-organisational measures overview

Architecture, shared responsibility and verifiable measures.

Product	ClaimEvidence
Code	CLE-PUB-09-EN
Document edition	Edition dated 30 August 2026
Effective / review	2026-08-30 / 2027-02-28
Document owner	Nil Tech Europe S.r.l. · Compliance & Security
Classification	Public

Preamble, nature and effect of this document

Nil Tech Europe S.r.l., with registered office at Via Calmaggione 5, 31100 Treviso (TV), Italia, VAT No. IT 05614380268 ("Niltech"), adopts this document in order to present an understandable architecture and control overview without confusing provider capabilities, Niltech configuration and available evidence.

This document is a corporate transparency and accountability record. It is not a third-party certification, legal opinion addressed to persons other than the company, absolute security warranty or blanket compliance statement; contractual commitments arise solely from the applicable agreements.

The measures described form a governance framework under Articles 24, 25 and 32 GDPR. Suitability and effectiveness must be assessed against the nature, subject matter, context, purposes and risk of each processing activity; no measure is characterised as absolute.

Personal and material scope

The objective scope includes ClaimEvidence, its public interfaces and processing strictly connected with the described functions. The corporate website and document library are published on clamevidence.tech; the application service is available through the separate app.clamevidence.tech domain. Hostinger provides infrastructure and, according to the applicable configuration, mail transport. MySQL/MariaDB is software running in the controlled environment and not a separate subprocessor unless a distinct managed service is used. OpenAI provides API services only for enabled functions; any separate email provider must be identified and assessed before use.

The relevant operations concern guided photo and document collection, case organisation, completeness checks, configurable analytical support, human review and export. Potential information categories are: demo and security-pack requests on the site; in the application, case identifiers, authorised contacts, photographs, documents, notes, session metadata and assisted outputs. The actual privacy role, lawful basis and extent of processing depend on the contractual relationship and the lawful instructions of the party determining purposes and essential means.

Definitions and interpretation

- "Service" means the ClaimEvidence functions made available under the agreement.
- "Customer" means the legal person or professional entering into the agreement with Niltech.
- "Authorised User" means an individual enabled by the Customer to use the Service under its responsibility.
- "Customer Data" means data, documents, images, instructions and other content submitted or generated on the Customer's behalf.

- “Assisted Output” means a result produced through automated rules or artificial-intelligence components and subject to the stated controls.
- “Further Supplier” means a third party providing Niltech with a technical service relevant to the documented scope.
- “Incident” means an event compromising or capable of compromising confidentiality, integrity, availability, authenticity or resilience.
- “Business Day” means a day other than Saturday, Sunday or an Italian national public holiday.

Specific duties and safeguards

1. Within its assigned role and without prejudice to the Customer’s responsibilities, Niltech shall maintain asset and data inventory, classification and ownership. The applicable file identifies the owner, scope, dependencies, acceptance criterion and evidence; absent those elements, the safeguard is not treated as demonstrated.
2. Within its assigned role and without prejudice to the Customer’s responsibilities, Niltech shall apply named access, least privilege and periodic review. The applicable file identifies the owner, scope, dependencies, acceptance criterion and evidence; absent those elements, the safeguard is not treated as demonstrated.
3. Within its assigned role and without prejudice to the Customer’s responsibilities, Niltech shall manage configurations, secrets and changes with segregation and traceability. The applicable file identifies the owner, scope, dependencies, acceptance criterion and evidence; absent those elements, the safeguard is not treated as demonstrated.
4. Within its assigned role and without prejudice to the Customer’s responsibilities, Niltech shall collect proportionate logs and alerts protected from alteration and misuse. The applicable file identifies the owner, scope, dependencies, acceptance criterion and evidence; absent those elements, the safeguard is not treated as demonstrated.
5. Within its assigned role and without prejudice to the Customer’s responsibilities, Niltech shall manage vulnerabilities, dependencies, patches and risk acceptance. The applicable file identifies the owner, scope, dependencies, acceptance criterion and evidence; absent those elements, the safeguard is not treated as demonstrated.
6. Within its assigned role and without prejudice to the Customer’s responsibilities, Niltech shall evidence incident response, backup, restore and continuity. The applicable file identifies the owner, scope, dependencies, acceptance criterion and evidence; absent those elements, the safeguard is not treated as demonstrated.

Scope and architecture

The corporate website and document library are published on claimevidence.tech; the application service is available through the separate app.claimevidence.tech domain. Hostinger provides infrastructure and, according to the applicable configuration, mail transport. MySQL/MariaDB is software running in the controlled environment and not a separate subprocessor unless a distinct managed service is used. OpenAI provides API services only for enabled functions; any separate email provider must be identified and assessed before use.

Relevant technology chain: Hostinger, OpenAI, MySQL/MariaDB, email transport.

Organisational measures

- named access and least privilege
- change, incident, supplier and rights management
- role-proportionate training and periodic review
- document classification and controlled evidence sharing

Technical measures

Authentication, authorisation, transport protection, logging, environment isolation, updates, secret management, backup and monitoring are applied per component and verified through evidence. This document does not assert undocumented algorithms, certifications or configurations.

Shared responsibility

Niltech manages the application and configurations under its control; providers manage their platforms; the customer manages users, purposes, data, devices and decisions. Contractual boundaries control.

Scope, audience and status of this document

This document is intended for customers, prospects, authorised users, advisers and control functions needing to understand the ClaimEvidence scope. Its specific objective is to present an understandable architecture and control overview without confusing provider capabilities, Niltech configuration and available evidence. It applies to the stated document revision and date and must be read with the applicable agreement, order, DPA, technical specifications and controlled procedures.

The corporate website and document library are published on claimevidence.tech; the application service is available through the separate app.claimevidence.tech domain. Hostinger provides infrastructure and, according to the applicable configuration, mail transport. MySQL/MariaDB is software running in the controlled environment and not a separate subprocessor unless a distinct managed service is used. OpenAI provides API services only for enabled functions; any separate email provider must be identified and assessed before use.

Executed agreements and actually approved configurations prevail in case of inconsistency. Public information describes the control programme; it does not turn optional provider capabilities into Niltech controls or automatically attest legal applicability or satisfaction.

Exceptions, non-conformity and escalation

A deviation is not accepted by custom. The owner records the affected requirement, cause, impact, exposed data and persons, compensating measures, approver, expiry and closure criterion. The exception is reviewed if risk changes or a measure does not work as expected.

Incidents, possible unlawful processing, loss of data control, outputs with severe impact, contractual breaches, unapproved suppliers or unreliable evidence must be escalated without delay. Current Legal and functional scope: Payment services are outside the scope described by this documentation.

- contain risk and suspend the affected phase where needed
- preserve evidence, timing, decisions and communications
- involve privacy, security, product, legal or management owners as appropriate
- resume only after measure verification and documented authorisation

Review, change and improvement

The document is reviewed at least every six months and earlier when purpose, audience, data, GDPR or AI Act role, supplier, model, architecture, location, contractual terms or legal requirements change. Incidents, complaints, failed tests and new vulnerabilities trigger an extraordinary review.

Each review records inputs, participants, decision, changes, superseded evidence, remaining gaps and next date. Material corrections are published without retroactively altering the prior document revision. Contact and requests: info@nil-tech.net.

- check change register and related documents
- retest affected controls
- update manifest, PDF, HTML and hashes
- notify recipients where the change affects their rights or duties

Measure-adequacy standard

Measures are selected considering likelihood and severity to rights, continuity and information assets, state of the art, cost and dependencies. This overview does not attest that every measure applies identically to every component: the controlled file maps each control to scope, owner, evidence, test result, exception and review date.

No unverified algorithms, key lengths, certifications, regions, recovery objectives or frequencies are claimed. Encryption, logging, backups or automated scanning reduce specific risks but do not eliminate configuration errors, privilege abuse, dependencies or unavailability.

Shared responsibility and evidence access

Niltech governs components under its control; each supplier is responsible for its services under contract; the Customer governs users, instructions, endpoints, recipients, lawful bases and proper use of outputs. A Customer deficiency does not discharge Niltech from its duties and vice versa.

Detailed diagrams, configurations, vulnerability reports, access evidence and response procedures are confidential and made available, where justified, through the controlled security pack, a confidentiality agreement or audit right. This restriction protects security and may not be used to withhold information required by the controller or an authority.

Allocation of responsibility and reliance limitations

Within its sphere of responsibility, the Customer warrants the lawfulness of submitted data and instructions, user authorisation, suitable lawful bases and notices, and professional verification of outputs. Niltech remains responsible for activities directly under its control and does not assume the Customer's regulatory, professional or decision-making functions.

Outputs from ClaimEvidence are auxiliary. Unless expressly agreed and subject to mandatory law, they are not legal advice, an expert determination, insurance decision, liability finding, credit assessment or other reserved professional act. The recipient must examine sources, completeness, consistency and consequences before use.

Nothing excludes liability that cannot lawfully be excluded. Outside those cases, attribution, remedies, limitations and quantification principles follow the applicable agreement, taking account of contributory conduct, mitigation duties and foreseeability under the governing law.

Evidence, review, requests and governing law

Every material assertion must be traceable to a contract, approved configuration, register, minutes, test, log or other reliable evidence. Supplier statements and Niltech controls are kept distinct. Absence of incidents is not, by itself, proof that a measure is effective.

Revisions are dated, reasoned and approved. A later revision does not retroactively alter facts or commitments applicable to earlier periods. Published copies are identified by code, date and cryptographic digest; those elements evidence copy integrity, not the substantive effectiveness of described controls.

Reports, clarification requests, rights requests and complaints may be sent to info@nil-tech.net. Niltech verifies identity and authority where necessary, records the request, responds within applicable periods and communicates any reasoned extension or refusal.

Unless mandatory law or a written agreement provides otherwise, Italian law governs interpretation. The Italian text is controlling; the English translation is provided for convenience.

Official sources and legal date

References checked on 2026-08-30. Applicability, role and any relevant commencement dates must be reassessed against the concrete facts.
